EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kathleen Tyrrell on 3/10/10.

The application has been amended as follows:

Amend claims 21 and 22 as follows:

Claim 21: A transdermal patch for external use having a backing layer and a pressure-sensitive adhesive layer formed on one surface of the backing layer, said pressure-sensitive adhesive layer consisting essentially of polyisobutylene, a mineral oil and fentanyl as an active ingredient in the pressure-sensitive adhesive layer, contents of polyisobutylene and fentanyl in the pressure-sensitive adhesive layer respectively ranging from 85.0 to 93.0% by mass and 1 to 6% by mass while the content of the mineral oil being from ~~0.1 to 0.05~~ 0.25 to 0.05 parts by mass based on polyisobutylene, wherein the pressure-sensitive adhesive layer does not contain a hydrophilic polymer.

Claim 22: A transdermal patch for external use having a backing layer and a pressure-sensitive adhesive layer formed on one surface of the backing layer, said pressure-sensitive adhesive layer consisting essentially of polyisobutylene, a mineral oil, a percutaneous absorption enhancer and fentanyl as an active ingredient in the pressure-sensitive adhesive layer, contents of polyisobutylene and fentanyl in the pressure-sensitive adhesive layer respectively ranging from 85.0 to 93.0%

by mass and 1 to 6% by mass while the content of the mineral oil being from ~~0.1 to 0.05~~ 0.25 to 0.05 parts by mass based on polyisobutylene, wherein the pressure-sensitive adhesive layer does not contain a hydrophilic polymer.

The following is an examiner's statement of reasons for allowance: The instant claims are drawn to a transdermal patch comprising a high concentration of polyisobutylene (85-93%), a mineral oil, fentanyl and a penetration enhancer, while not enclosing a hydrophilic polymer to maintain structural integrity. The closest prior art, Hori et al (USPN 5814032) discloses a transdermal patch comprising a high concentration of polyisobutylene, (50-95%), a concentration of fentanyl as an active agent, mineral oil and a permeation enhancer. The reference also requires the presence of a hydrophilic polymer in order to maintain structural integrity, and reduce skin irritation. However the patch of the instant claims is able to achieve these means without the use of hydrophilic polymers whatsoever. As such, the instantly claimed patch is able to maintain structural integrity, reduce skin irritation and remnants upon removal without the use of additional components. The closest prior art has not disclosed these features. For these reasons the instant claims are novel and non-obvious in view of the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
